

Drawing: TSRLF together with instant switching Electronic load relay and Bypass-contactor.
 Switch on a 230V, 12kVA, Transformer, without Inrush.
 Slow switching rate because of lifetime of mechanically contactor.

Rel. with 230V

1A contact

230V coil

Single phase variac.
 Softstart for Variac with every load

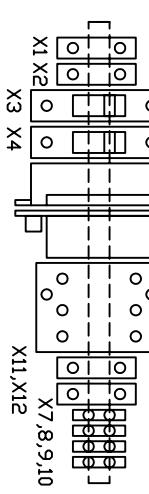

Switch on delay: ca. 5-20msec, because of TSRLF synchronises to power line voltage.

Switch off delay 5-20 msec, because TSRLF switched off in the polarity from the line voltage

where premagnetized.

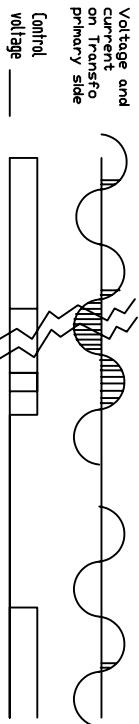

The Control output of TSRLF switches the contactor, for non acting of contacts
